Metro Ethernet

Highway 1 Metro Ethernet

Robust.Secure.Scalable

Organisations can now concentrate on running their business rather than their network. Business management challenges can enjoy high priorities whilst positioning for rapid growth all while reducing costs with Highway 1's Australian MPLS Network. Our Metro Ethernet services are easy to implement and deliver flexibility while eliminating the time and expense of traditional data delivery methods. Highway 1's services enable organisations to quickly deploy, replace or refine a network solution that encompasses of a high-speed, reliable, and scalable network suitable for business critical application.

Highway 1's focus on innovation ensures that clients receive the benefits of cutting-edge data access technology. Since our conception in 1994, we have focused on delivering the best possible service and the best possible value to our customers. In pursuit of that concept we have put together

Network Solutions

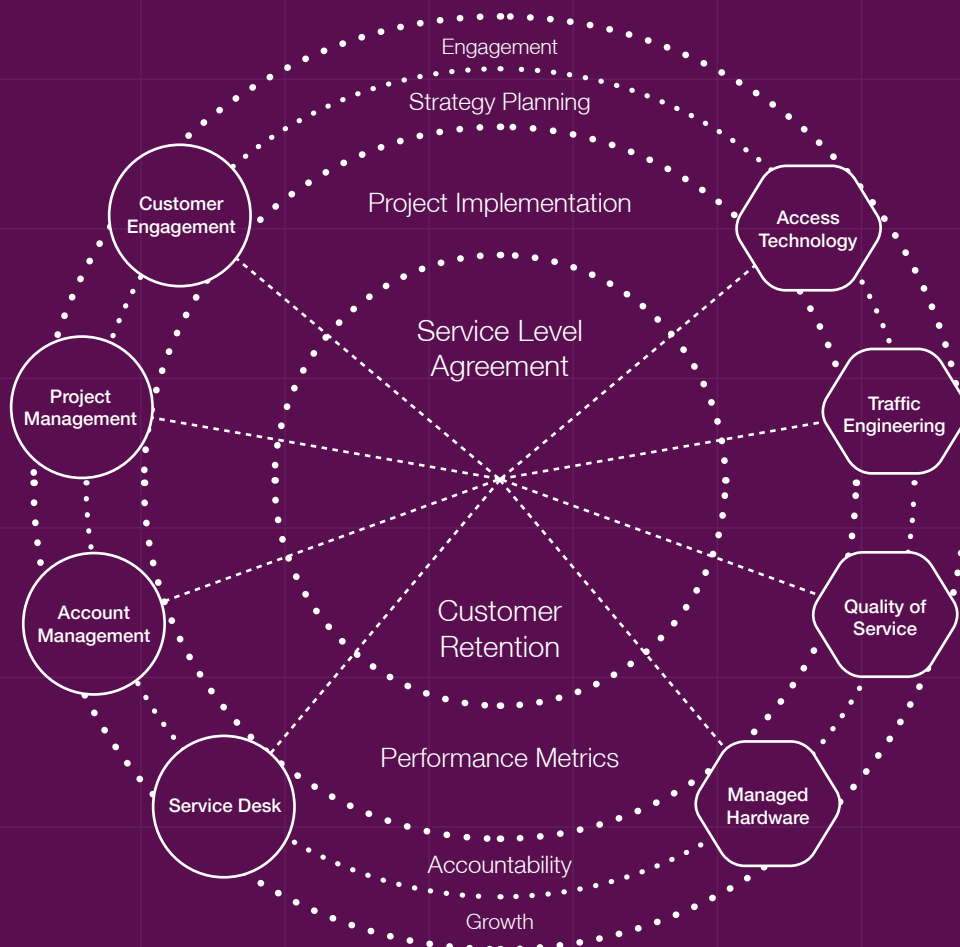

Our network solutions deliver measurable performance and reliability improvements

Deliver business critical applications: Utilise the latest technology and traffic engineering methods to deliver business critical applications.

Empower and motivate staff: implement the latest technologies and the fastest delivery methods to raise staff morale and encourage productivity

Sustain and increase business growth: refocus on core strategic business goals by off-loading tedious and unconstructive support and maintenance tasks

Align with company goals: Closely bridge strategy with execution by enabling your network to help link the implementation of the latest technology to key performance metrics - meeting cost centre goals and profit centre performance.

Robust

Redundant.Redundant.Redundant

Our core network drives our business, without it we would cease to exist. It is with the acknowledgement and understanding of that notion that we have built a core network driven by best-of-breed technology and equipment. With major points of redundancy in place to ensure that the network is there for you when you need it.

Secure

Physical.Network.Content

All of our data centres deliver the highest levels of security in Australia. We understand the challenges of business operations and the need for a secure and stable network. At Highway 1, security is a procedure not a luxury.

Scalable

Robust.Secure.Scalable

Our MPLS Network delivers highly flexible and scalable solutions to power your business growth. As new customers are acquired, segmented, managed, and developed, network performance is put under pressure. Highway 1's MPLS network helps you manage your network by scaling your network to suit your needs as efficiently and quickly as possible. Our solutions cover the spectrum of access technologies available today, whether you require fixed or wireless services.

Network Coverage

Metro Ethernet is available in all capital cities and most regional centres.

Diverse Paths: Our core network infrastructure utilises multiple diverse paths to ensure maximum uptime to keep us well inside our Service Level Agreement.

National Infrastructure: our national reach and aggregated presence allows you to take advantage of the investment we have made.

Multiple Access Technologies: Our network brings together a full spectrum of managed access technologies and from speeds from 10Mbps to 1Gbps over copper and fibre. 10Gbps over dark fibre.

Qualified Staff: Our staff are experts in the industry with capabilities and experience in large multi-site network rollouts.

Technology

Fast.Flexible.Redundant

Partnering with the best makes Highway 1 one of the best. Our technology partners provide us with industry leading last-mile infrastructure which Highway 1 manages using best practice models. With a spectrum of wired and wireless services, we can provide carrier diverse paths to a single premise allowing you to take advantage of our multi-vendor aggregation infrastructure to allow seamless failover should disasters occur.

Delivery

Systematic.Fast.Qualified

Our delivery managers are highly qualified and trained professionals. The delivery of our services is a systematic and process driven process. Managed from step to step using best practice models and backed by our Service Level Agreement.

Management

Accountable.Experienced.Innovative

An organisation's most important asset is its management. Our managers are experienced business people with a wealth of commercial and technical expertise. Our group of ICT companies positions Highway 1 in a unique place as a national internet service provider with expertise and support which is usually provided to enterprise and government level customers.
